

AfriStyle AI - Complete Android APK Development Prompt

Core App Concept

Create a native Android APK that combines advanced AI face insertion technology with African fashion virtual try-on experiences. The app should work offline-first with optional cloud enhancement, eliminating the need for paid API tiers while providing premium virtual styling experiences.

Primary Functions

1. African Fashion Virtual Try-On

- Browse and search extensive catalog of African print fashion including:
 - Ankara dresses (bodycon, maxi, midi, A-line)
 - Kente print outfits and formal wear
 - Dashiki tops, tunics, and traditional wear
 - Kitenge skirts, dresses, and two-piece sets
 - African print head wraps, turbans, and accessories
 - Mudcloth patterns and earth-tone designs
 - Modern fusion African prints with contemporary cuts

2. Smart Face Insertion Technology

- Implement the "Nano-Banana" AI model for seamless face insertion
 - Character Reference consistency across all outfit changes
 - Real-time processing without requiring paid API keys
 - Local AI processing with optional cloud enhancement
-

Technical Architecture

AI Processing Stack (No Paid APIs Required)

Primary: Local TensorFlow Lite models for face detection/insertion
Secondary: Free-tier Hugging Face models for enhancement
Fallback: Open-source MediaPipe for real-time processing
Optional: Free Google AI APIs (non-tier) for cloud backup

Core Technologies

- **Framework:** React Native or Flutter for cross-platform compatibility
 - **Local Storage:** SQLite for user preferences and image caching
 - **Image Processing:** OpenCV for Android + custom neural networks
 - **UI Components:** Native Android Material Design 3
 - **Analytics:** Firebase Analytics (free tier)
-

User Experience Flow

Setup & Onboarding

1. **Welcome Screen:** Showcase African fashion diversity
2. **Photo Capture:** Built-in camera with selfie guidance
 - Face detection for optimal angles
 - Multiple reference photos for better consistency
 - Privacy-first: all processing happens locally
3. **Style Preferences:** Quick quiz about favorite African prints and fits

Main Interface

1. **Browse Tab:**
 - Featured African designers and brands
 - Trending prints and seasonal collections
 - Filter by occasion (casual, formal, traditional ceremonies)
2. **Search & Discovery:**

Search Bar Suggestions:

"Ankara wedding dress"

"Kente headwrap styles"

"Dashiki casual wear"

"African print office attire"

"Traditional ceremony outfits"

3. **Try-On Experience:**
 - Instant preview with face insertion
 - Real-time adjustments for body shape and fit
 - Lighting and skin tone matching
 - Pose variations (front, side, walking poses)

User Interface Specifications

Main Try-On Screen

Search & Browse Interface

- **Grid Layout:** 2 columns on mobile, 3+ on tablets
- **Category Filters:** Swipeable chips (Ankara, Kente, Dashiki, etc.)
- **Quick Actions:** Heart for favorites, Share button, Try-On button

Export & Sharing

- **Three-dot menu** (top right) containing:
 - Export All Images
 - Share Collection
 - Save to Gallery
 - Create Style Board
 - Analytics Dashboard

Core Features Implementation

1. Advanced Face Insertion ("Nano-Banana" Model)

kotlin

```
// Pseudo-code structure
class NanoBananaProcessor {
    fun insertFaceIntoOutfit(
        userFace: Bitmap,
        outfitTemplate: Bitmap,
        bodyPose: PoseData
    ): ProcessedImage {
        // Local TensorFlow Lite processing
        // No API keys required
    }
}
```

2. Character Reference Consistency

- Maintain facial features across all outfit changes
- Hair style and accessories consistency
- Skin tone matching with outfit colors
- Expression and pose variations

3. Smart Outfit Fitting

- Body shape analysis from reference photos
- Automatic size adjustments
- Fabric drape simulation
- Cultural authenticity preservation

4. Version History System

- Horizontal scrollable timeline
- Tap any version to view in main frame
- Swipe to delete versions
- Automatic saving with timestamps

Data & Analytics Integration

User Preference Tracking

```
json
```

```
{
  "user_profile": {
    "preferred_prints": ["ankara", "kente"],
    "favorite_cuts": ["maxi", "bodycon"],
    "color_preferences": ["earth_tones", "vibrant"],
    "occasion_frequency": {
      "casual": 60,
      "formal": 25,
      "traditional": 15
    }
  }
}
```

Style Recommendations

- ML-based outfit suggestions
- Seasonal trend integration
- Cultural event calendar tie-ins
- Mix-and-match suggestions

Privacy & Security

Local-First Approach

- All face processing happens on-device
- No images sent to external servers without explicit consent
- Optional cloud backup with end-to-end encryption
- GDPR and privacy regulation compliant

Data Protection

User Photos: Encrypted local storage only

Usage Analytics: Anonymized behavioral data only

Optional Cloud: Explicit opt-in with clear data policy

Third-party APIs: Only for enhancement, never for core functionality

Cultural Sensitivity & Authenticity

Design Principles

- Collaborate with African fashion designers

- Accurate representation of traditional prints and their meanings
- Cultural context education within the app
- Support for African fashion entrepreneurs and brands

Educational Components

- Print origin stories and cultural significance
 - Styling tips from African fashion experts
 - Traditional vs. modern fusion guidance
 - Respectful cultural appreciation content
-

Android-Specific Features

Native Integrations

xml

```
<!-- Key Android permissions -->
<uses-permission android:name="android.permission.CAMERA" />
<uses-permission android:name="android.permission.WRITE_EXTERNAL_STORAGE" />
<uses-permission android:name="android.permission.READ_EXTERNAL_STORAGE" />
<uses-permission android:name="android.permission.INTERNET" />
```

Performance Optimization

- Background processing for large try-on queues
 - Adaptive quality based on device capabilities
 - Efficient memory management for high-resolution images
 - Battery optimization for AI processing
-

Business Integration Capabilities

E-commerce Ready

- Direct integration with Shopify, WooCommerce
- Custom API endpoints for fashion retailers
- Virtual showroom creation tools
- Social commerce features (Instagram, TikTok integration)

Monetization Options

- Premium filters and effects
 - Designer collaboration collections
 - Custom outfit creation tools
 - Style consultation booking
 - Affiliate marketing with African fashion brands
-

Development Phases

Phase 1: Core MVP (2-3 months)

- Basic face insertion with local processing
- Essential African print catalog (50+ outfits)
- Simple try-on experience
- Photo capture and basic editing

Phase 2: Enhanced Features (1-2 months)

- Advanced AI processing improvements
- Expanded outfit catalog (200+ items)
- Social sharing features
- Basic analytics dashboard

Phase 3: Premium Experience (2-3 months)

- Professional styling tools
 - Designer collaborations
 - Advanced customization options
 - E-commerce integrations
-

Technical Requirements for APK

Development Stack

Language: Kotlin (primary) + Java (legacy support)

UI Framework: Jetpack Compose (modern) or XML Views

AI/ML: TensorFlow Lite + MediaPipe + Custom models

Image Processing: OpenCV + Glide for image loading

Database: Room (SQLite) for local storage

Networking: Retrofit2 + OkHttp for API calls
Architecture: MVVM with Repository pattern
Testing: JUnit + Espresso + Mockito

Build Configuration

```
gradle

android {
    compileSdk 34
    minSdk 24 // Covers 85%+ of Android devices
    targetSdk 34

    buildFeatures {
        compose true
        mlModelBinding true
    }
}
```

Success Metrics

User Engagement

- Daily active users trying on outfits
- Session duration and outfit exploration
- Social sharing frequency
- User retention rates

Business Impact

- Conversion rates for e-commerce partners
- Reduced return rates for online fashion purchases
- User satisfaction scores
- Brand partnership success metrics

Final Deliverables

1. **Complete APK file** ready for Google Play Store
2. **Source code** with comprehensive documentation
3. **API documentation** for future integrations
4. **User manual** and onboarding materials

5. **Analytics dashboard** for usage insights

6. **Marketing assets** and app store listings

🎨 **Goal:** Create the most authentic, culturally-sensitive, and technologically advanced African fashion virtual try-on experience that works entirely offline while providing premium AI-powered styling capabilities without requiring expensive API subscriptions.
